

TAVAR[®]

Surfaces and accessories

Boards

Our 18 mm multiplex boards are made of birch and come from northern European sustainable forestry.

Top layers are available in four variants:

1. Veneered surfaces in oak, maple and birch (many other types of wood possible).
The surfaces are treated twice with hard wax oil.
2. Eco-surfaces of the company Koskisen with water based colour and transparent sealing.
3. HPL surfaces from *Pfleiderer*, each 0.8 mm, structure "Top Velvet", particularly scratch-resistant and durable.
4. Melamine white resin surface.

Connectors

Massive wood with shellac surface

Oak

Maple

Oak black

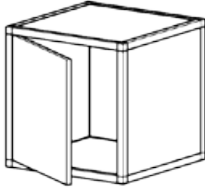

The connectors are made of high quality certified maple and European oak.

The surfaces are treated with wax resin, based on natural shellac, oil, wax and fermentation alcohol.

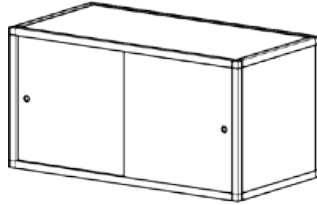

At the *Hesse Lignal* lab, our connectors are treated with various combined preparations and tested to develop the optimal surface and best possible sunscreen.
